DETAILED ACTION

Page 2

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In *re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

- 2. Claims 1-50 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-31 of U.S. Patent No. 6,613,823.

 Although the conflicting claims are not identical, they are not patentably distinct from each other because one of the possible compositions disclosed by the patent is the same as the composition taught by the instant application.
- 3. Claims 1-50 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-29 of copending allowed Application No. 10/322,247. Although the conflicting claims are not identical, they are not patentably distinct from each other because one of the possible

Art Unit: 1714

compositions disclosed by the copending allowed application is the same as the composition taught by the instant application.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-50 are rejected under 35 U.S.C. 102(b or e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ishii et al. 5,250,593, Amos et al. 6,096,811, Stevenson et al. 6,224,791,Battiste et al. 6,613,823, Stein et al. 6,770,693,Wick et al. 6,992,124, Battiste et al. 2003/0158306 or De la Cruz et al. 2005/0288403.
- 6. Ishii et al. disclose polyolefin, hindered phenol and applicants' phosphites in claim 1, hindered amines in claim 2, olefin homo- and copolymers in column 3, lines 25-40 and masterbatching ingredients together or separately in column 4, lines 46-57. The masterbatched phosphites are equivalent of applicants' kit. Amos et al. teach polyolefins in claim 1, antioxidants in claim 13, phosphites, hindered phenols and light stabilizers in claims 14-15 and concentrations in claim 17. Stevenson et al. recite diphosphite and lactone in claim 1, triaryl phosphite in claim 4, hindered phenols in claims 5-6 and polyolefins in claim 10. UV absorbers and light stabilizers can be found

Application/Control Number: 10/719,940

Art Unit: 1714

in the paragraph overlapping columns 12 and 13. For different polyolefins see column 9, lines 35-59. The blend of stabilizers is applicants' kit. Battiste et al. ('823) reveal polyolefins, phosphites concentrations, catalysts, hindered phenols, water and pH in claims 1-31 and light stabilizers and UV absorbers from column 11, line 14, through column 12, line 13. The contents of Stein et al. are similar to the contents of Stevenson et al. Wick et al. divulge phosphites, hindered phenols and hindered amines in claims 1-4 and polyolefins in claims 5-6. The contents of Battiste et al. ('306) are similar to the contents of Battiste et al. ('823). De la Cruz et al. display polypropylene, phenolic antioxidants, a mixture of phosphite antioxidants and hindered amines in claims 1-11. Applicants' claims are not novel. In the alternative, it would have been obvious to one having ordinary skill in the art; at the time the invention was made, to select applicants' ingredients from a list of equivalents.
